

CEO method works only with object properties assertions and can't work with data property assertions. This creates a constraint on which ontologies may be used.

Criteria:

- object properties should be used in constructing a taxonomy
- data properties should be used as little as possible

Found ontologies:

Name	URL	Status	Size	Suitable
Koala	-	Contains suitable rules but relies on data properties	70	No
Food & Wine	-	Does not contain data properties	1223	Yes
Instruments	-	Does not contain data properties	299	Yes
Pizza	-	-	-	-
Homology	link)	Does not contain object or data properties	565	No
Plants	link	Contains object properties, does not contain data properties	24,532	Maybe
Uberon	link	Quite complex, contains object properties, does not contain data properties	370,000+	Most probably no
Duo	link	Contains object properties and numerical data properties	4,300	Maybe but cautiously
IAO	link	Have similar structure as DUO	3,718	Maybe but with cautiously
STATO	link	Have similar structure as DUO	11,674	Maybe but with cautiously
